Information CPM GmbH

CPM is working in the area of metal forming. They provide technical consulting and simulation software to design and optimize forging processes.

CPM works worldwide. They have agents in all leading countries in the forging industry. There are some 25 customers in Brazil in cold and hot forging as well.

CPM works in Brazil since the early 1990's and developed the business very well in the last decade.

CPM exhibits at the wire show for 20 years now. This time the booth was redesigned and enlarged to allow for more intensive demonstration and discussion with customers. CPM experienced very intensive and focused discussions during the show and could get good business.

Besides the technical service CPM focused on presenting their simulation software products "*eesy-form*," "*eesy-2-form*" and "*eesy-DieOpt*".

Highlight was the new version 5 of "*eesy-2-form*" with a completely redesigned handling of the tools. It allows now for modelling of several tools moving independent during the forming procedure to allow for modelling of most recent development in tool design due to new machine concepts.

Another important new development shown in the latest version of "*eesy-form*" was the newly designed tool analysis module.

CPM will continue to focus on the Brazilian market. Besides the well established software products CPM will offer excellent technical consulting and will extend the activities by special technical training offers .
